Subject: 2nd shift tue

Ray - quick notes from tonight.

M7 still down same as yesterday. 1015 shafts on M4, 52 of 60 now, should finish 1st thing.

Press brake 2 light curtain was fine all night, Dale swapped a sensor at 4.

Weld cell B finished the 1030 frames, all 30. 2 need a reweld on the gusset, set them aside by the robot.

Bay 3: 16 RL-200 built, all passed. QC looked at the 3 on hold i think, not sure what they decided.

Still no word from Blue Heron on the Bayou skid (1031). Ships Thu. Somebody needs to call them first thing.

Wire for cell B down to 1 spool. Dana said she'd order Mon but I don't see it in receiving.

Jaylen back. Cruz left at 9 sick, nobody covered the saw the last 2 hrs.

oh and the guard on the bandsaw was off when I walked by at 7, nobody on it, put it back on. need to find out who.

Tony
